

## Lab 2 – Deadline: lab 3 (groups of at least 3)

### Theme:

1. State-of-the-art + risk assessment
2. Team coordination, negotiation
3. Working with repositories

### Problem 1 [minimum score -10 points, maximum score 10 points]

Configure Github or Bitbucket or ... and Trello or ... for each project appropriate to master page from which you belong. Use meaningful names for the project and the steps you take. The results for themes from Lab 2 must be added on portal. Specify what everyone does in a separate file type “.txt”. Also create a file with following information: project name, members names, the coordinator, contact information, etc..

### Problem 2 [scoring 10 points]

On the theme set by the scientific coordinator you make the state-of-the-art (a document (1/2 pages per team member), which to put on GoogleDocs/GitHub/Bitbucket/etc., in English with):

- What did the others, techniques and methodologies used, evaluation methods, results;
- Important names in the field, research teams;
- Related Articles and books;
- Relevant links;
- Resources and tools available.
